PEL101GV®

STRENGTHENING THE IMMUNITY OF VINEYARDS AGAINST SPRING FROST

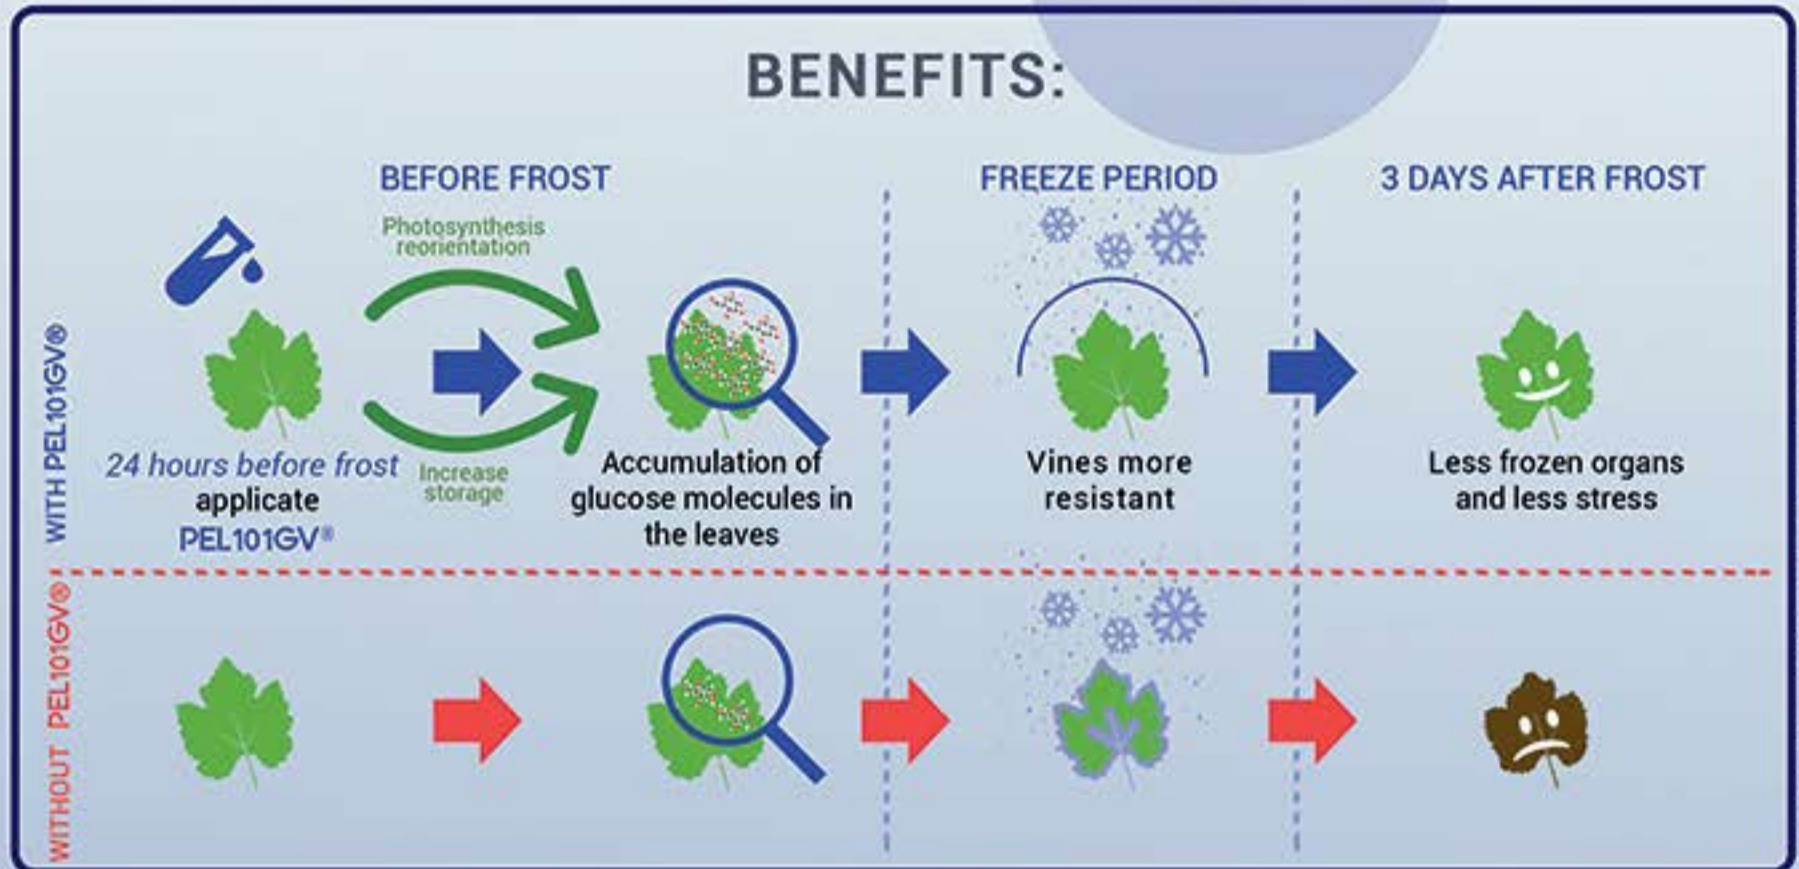

AMM biocontrol N° 2070108

PEL101GV® IS THE SOLUTION TO ACCOMPANY YOUR VINES IN FROSTY SITUATION.

From natural extracts, PEL101GV® is activating a metabolism that lowers by 1 to 2° C the temperature at which the water of cells will freeze. PEL101GV® limits the impact of frost while preserving the development and efficiency of your vineyards.

BENEFITS:

APPLICATION STAGES

KEYS OF SUCCESS:

- Minimum intake 24 hours before the risk of frost to allow the plant to induce resistance.
- Treatment with conditions that maximize the penetration of the PEL101GV® (hygrometry higher than 60%).
- Application on all foliar organs and make sure to water them.

PEL101GV : 874 g/kg of heptamaltoglucan. Number of AMM : 2070108. Owned by ELICITYL. Exempt of classification. For limited usages, doses, conditions and restrictions of use : please refer to the label of the product and to the following website : www.phytodata.com.
